The attachment for straight drilling - no matter where

New mobile drill attachment MB 40 from Festool

In true Festool style, the company has once again developed an innovative FastFix accessory: the new MB 40 mobile drilling attachment, which enables precise, right-angled and repeatable drilling anywhere.

The MB 40 mobile drilling attachment is the perfect companion when precision is required. As a compact drilling aid, it enables right-angled, precise and repeatable drilling, regardless of the location. Thanks to versatile stops and precise depth adjustment, vertical holes, face holes and holes in rows can be drilled successfully. The extraction unit can be coupled directly to the base plate for a good view of the drilling area. As a FastFix attachment, it is ideal for drilling applications in wood, metal and plastic, thus expanding the application possibilities of Festool cordless drills.

If must be precise

The MB 40 mobile drill attachment comes to the workpiece and not the other way round. It is handy and compact so that it can be taken anywhere. Solid and sturdily built, with depth adjustment via a scale up to 50 millimetres and a variety of stops and adapters, it can be quickly converted for drilling holes in workpiece edges and guarantees the required precision even then.

It's all in the detail

The MB 40 enables quick, easy and tool-free assembly of Festool cordless drills and cordless impact drivers. It is suitable for producing short hole line groups in System 32 and offers a variety of stops and adapters that can be customised. The rip fence ensures precise drilling parallel to the edge, while the guide rail adapter enables fast in-line drilling. Precise drilling in panel edges is also possible with the stop for face drilling

Advantages at a glance

- **Precise:** Robust and stable construction - for precise drilling
- **Precise depth setting:** With zero setting and readable drilling depth up to 50 millimetres and display in millimetres and inches
- **Versatile accessories:** With rip fence and stop for face drilling for precise and repeatable drilling in panel edges or guide rail adapter for drilling in long and wide workpieces
- **Unique:** With hole row function for short hole row groups in the 32-hole system
- **Compatible:** The tool chuck can be fitted quickly and without additional tools. The CENTROTEC chuck also enables quick insertion and replacement of drilling bits
- **Integrated:** Chip extraction for dust extractors from dust class M and hose diameter D 27
- **Easy positioning:** Markings on the base plate simplify exact alignment on the workpiece
- **Stable:** rubberised sole for precise alignment without slipping

The MB 40 mobile drill attachment will be available in stores from April 2025. Further information is available at [festool.co.uk](https://www.festool.co.uk)

The attachment for straight drilling - no matter where New mobile drill attachment MB 40 from Festool

Festool presents the new MB 40 mobile drilling attachment, which enables right-angled, precise and repeatable drilling anywhere. The compact and handy drill attachment can be mounted without tools. Thanks to versatile stops and precise depth adjustment, vertical holes, face holes and holes in rows can be drilled with precision. The extraction unit can be coupled directly to the base plate for a good view of the drilling area. Spring-loaded columns enable easy guidance when drilling. The marks and markings on the base plate help when drilling rows of holes, cup bands and aligning to the mark to achieve drill holes with pinpoint accuracy. As a FastFix attachment, it is ideal for drilling applications in wood, metal and plastic, thus expanding the application possibilities of Festool cordless drills. It is suitable for producing short hole line groups in System 32 and offers a variety of stops and adapters that can be customised. The rip fence ensures precise drilling parallel to the edge, while the guide rail adapter enables fast in-line drilling. Precise drilling in panel edges is also possible with the stop for face drilling. The MB 40 mobile drilling attachment is the perfect companion when precision is required. It will be available in stores from April 2025. Further information is available at festool.co.uk

Technical data

Mounting	FastFix
Max. Drilling diameter softwood (Forstner bit)	40 mm
Max. Drilling diameter softwood (auger bit)	16 mm
Base plate dimensions	110 x 114 mm
Height	312 mm
Adjustment range depth stop	0 - 50 mm
Max. screw diameter (Fastening templates/fixtures)	4 mm
Stroke with depth stop, incl. spring	187 mm
Stroke without depth stop, without spring	203 mm
Dust extraction connection Ø	27 mm
Product weight without accessories	1.4 kg

New mobile drill attachment MB 40 from Festool: The attachment for straight drilling - no matter where

FastFix attachment

Enables you to assemble Festool cordless drill drivers and cordless impact drill drivers quickly, easily and completely without tools.

Depth controlled

For depth-limited holes up to 50 millimetres, such as rows of holes or cup bands, the exact immersion depth in the material can be set using the scale in millimetres or inches.

Hole series function

For holes in the 32 mm system with 3 mm hole line pin and 5 mm hole line pin. The pin remains in the same position during the hole line project. No need to change the pin

Rip fence

For fast, precise and repeatable drilling parallel to an edge.

Stop for end drilling

Enables precise drilling in panel edges.

Guide rail adapter

For fast in-line drilling. The adapter can be attached to all Festool guide rails without tools.

**Sprung columns**

Enable easy guidance when drilling. For special applications, you can convert the drill attachment and remove the spring.

Variable use

Thanks to the holes in the base plate, you can mount the MB 40 on a workpiece or on customised fixtures.

**Tears and markings**

Helps when drilling rows of holes, cup bands and aligning to the mark to achieve precise drill holes.

**Dust extraction**

For a clear view of the drilling site and a clean working environment, a mobile extractor from dust class M can be connected to the extraction nozzle.
