## Battery power meets planing quality

The new HLC 82 cordless planer from Festool

**From October 2025, Festool will be expanding its 18V range with the new HLC 82 cordless planer - a powerful, handy tool for precise fitting work on the construction site and in the workshop. Whether chamfering beams, processing edge transitions on timber stud walls, rebating doors or adjusting plinths and fitting strips: The HLC 82 combines innovative technology with high performance for efficient and precise work in the woodworking trade.**

The HLC 82 is compatible with all Festool 18V battery packs\* and has a quick brake that stops the tool in less than two seconds, minimizing the risk of injury and damage to the workpiece.

### Maximum performance and precise woodworking

Equipped with a brushless EC-TEC motor, the HLC 82 delivers consistently high pulling power - even at maximum cutting depth. The motor is particularly efficient and energy-saving, which significantly increases the service life of the device. With a planing width of 82 millimetres and a maximum rebate depth of 25 millimetres, the HLC 82 is versatile - ideal for a wide range of interior and exterior finishing applications.

### Fine planing pattern - less sanding effort

A special highlight is the spiral blade with a pulling cut. It starts at an angle and peels the wood gently and without damaging the material. The result: an even, fine surface without visible planing strokes - and with significantly reduced noise.

### Versatile, ergonomic, well thought out

The cutting depth adjustment from 0 to 2.5 millimetres enables precise adjustment during work. The ergonomically shaped handle with soft grip surface ensures comfortable handling - both for horizontal and vertical applications. Thanks to its low weight, the planer can be guided effortlessly. Three integrated 90° V-grooves in the soleplate make it easier to chamfer workpieces such as boards and beams - for clean, controlled work without slipping.

### Innovative fiber sole for fast results

Another clever accessory is the newly developed chamfering soleplate. It enables precise and fast chamfering of long beams or squared timber. The wide, stable contact surface ensures a secure hold and even gliding - for straight chamfering in seconds. This saves time and increases efficiency. Even when using the rebate depth stop, a maximum rebate depth of 23 millimetres is maintained. The side-mounted rip fence ensures precise guidance when working on edges and prevents lateral drifting.

### Healthy working - well thought-out extraction system

The HLC 82 is equipped with two extraction channels for clean and healthy working: The longer channel is suitable for use with a vacuum cleaner, while the shorter one is designed for applications with high chip removal - ideal for working environments without extraction facilities. The angled spiral blade also contributes to noise reduction.

### **Tested by the trade - made for the trade**

"As with all our products, we had the HLC 82 intensively tested by tradespeople before its market launch," explains Pordi Kailer, Product Manager at Festool. "The feedback was consistently positive: The new cordless planer impresses with its performance, versatility and ergonomics. It takes mobile planing to a whole new level."

With its combination of innovative technology, well thought-out design and clever accessories, the HLC 82 is an indispensable helper for precise work - whether on the construction site or in the workshop. The new HLC 82 cordless planer will be available from specialist dealers from October 2025. Further information can be found at [festool.co.uk](https://festool.co.uk)

### **Battery power meets planing quality**

**The new HLC 82 cordless planer from Festool**

**From October 2025, Festool will be adding the new HLC 82 cordless planer to its 18V range - a compact, powerful tool for precise fitting work. Whether chamfering, rebating or edge processing: The HLC 82 impresses with its efficiency, versatility and fine planing pattern.**

The brushless EC-TEC motor ensures constant power, even at maximum cutting depth. The spiral blade with pulling cut enables smooth surfaces without visible planing strokes - with reduced noise. The cutting depth adjustment (0-2.5 mm), the low weight and the ergonomic soft grip handle offer a high level of working comfort. Three integrated V-grooves make chamfering easier. The innovative bevel soleplate and rip fence ensure precise results and efficient work. Two suction channels - for working with or without a suction cup - and a quick brake increase safety and cleanliness.

"The HLC 82 takes mobile planing to a new level," says Product Manager Pordi Kailer. Available from specialist dealers from October 2025. More information at [festool.co.uk](https://festool.co.uk)

### Technical data cordless planer HLC 82

Battery voltage (nominal voltage)	18 V
Speed of the planing shaft	11 500 min <sup>-1</sup>
Planing width	82 mm
Cutting depth	0 - 2.5 mm
Max. Folding depth without stop	25 mm
Max. Folding depth with stop	23 mm
Dust extraction connection	Ø 36 mm
Technology	Bluetooth®
Product weight without accessories	2.7 kg

---

### PICTURE PREVIEW @Picture rights Festool GmbH

#### Pulling power meets planing quality

The new HLC 82 cordless planer from Festool

#### Flawless work results

The HLC 82 works with a pulling cut for a particularly fine planing pattern. The spiral blade starts at an angle and peels off the wood in a way that is gentle on the material and tools - with a planing width of 82 millimetres, which ensures a particularly even result.

#### Versatile application possibilities

The rebate depth of 25 millimetres opens up a wide range of applications; even with the rebate depth stop, the maximum rebate depth is still 23 mm.

#### Removable fiber sole

The wide and stable contact surface of the removable bevel soleplate enables precise and long bevels to be created quickly on beams and squared timber.

#### Precise chamfering

The three different 90° V-grooves in the planer sole ensure a smooth glide when chamfering boards and beams - without slipping or getting lost.

### **Simple and precise cutting depth adjustment**

The cutting depth can be precisely adjusted and controlled between 0 - 2.5 millimeters - even while working.

### **Different suction channels**

The longer extraction duct already fitted is suitable for planing work with a vacuum cleaner. In working environments where the use of a vacuum cleaner is not possible, the short extraction channel can be used. This is ideal for continuous applications with maximum chip removal.

### **Easy handling**

The soft grip surface on the handle makes it extremely comfortable to work with, both horizontally and vertically. The additional grip ribs provide an even better hold. The low weight makes handling even easier.

### **Brushless EC-TEC motor**

Ensures powerful and energy-saving operation as well as long service life.
