Greater efficiency across the system

Festool is expanding its range of accessories with new system solutions – available from 7 September 2026

With targeted additions to its system solutions, Festool is systematically expanding its range of accessories in autumn 2026. The focus is on practical solutions for even more precise work, greater safety on site and increased efficiency in the day-to-day operations of tradespeople.

Precision and safety when sawing: multifunctional stop for the KAPEX

With the new AS-KS 120 R/L multifunctional stop, Festool is expanding its range of accessories for the KS 120 and KS 88 mitre-and-rip saws to include a versatile solution for precise and safe cuts. The hold-down function secures the workpiece reliably and reduces the risk of material kickback – without the need for time-consuming clamping. The height-adjustable stop enables the precise positioning and repeatable cutting of cornice and moulding profiles when mounted on a wall, whilst sliding splinter protection strips ensure tear-free cuts even with delicate materials. In addition to its function as a stop, the height-adjustable aluminium profile also serves as a length stop for repeat cuts. For batch cutting, the profile can be supplemented with the optional MFT/3-AR stop rider.

Efficient hand sanding as part of the system: new HSK sanding blocks

With the new **HSK hand sanding blocks**, Festool is specifically expanding its AC&C range in the field of surface finishing. The **HSK-A 80x130** combines ergonomic design with integrated dust extraction, enabling clean, health-conscious working whilst maintaining high efficiency. The range is complemented by the **HSK-Duo 80x133**, which, thanks to two different foam hardnesses, can be used versatilely on flat surfaces and curves. The mesh abrasive used significantly reduces dust levels whilst increasing service life.

A systematic approach taken to its logical conclusion: the First Aid Systainer

With the **First Aid Systainer SYS3 M 112-FA**, Festool is introducing a standard-compliant first aid solution to the Systainer system for the first time. The first-aid kit meets the requirements of DIN 13157 and is therefore ideally suited to smaller craft businesses. Thanks to its full integration into the Systainer system, the solution can be transported, linked and used flexibly – a further step towards seamless organisation in everyday working life.

As early as spring 2026, Festool expanded its range of accessories to include new system solutions for sawing, dust extraction and sanding – including, amongst others, the FS-EP plunge positioner, DIA LAMINATE/HPL diamond circular saw blades, the CT-ASA flex arm, as well as Granat sanding discs and complementary SYS-AIR and CT accessories. In addition, there are innovations such as the LM-OF 1400 and LM-DTS/RTS light modules, the Bluetooth® module BT-CT 26-48 I, the RM-D36/27-AS/CT reducer sleeve, the SK-CT/SYS seat cushion and the Systainer³ PowerHub, which further enhance comfort, visibility and system integration.

Greater efficiency within the system

Festool is expanding its range of accessories from 7 September 2026

Festool is specifically expanding its range of accessories in autumn 2026, thereby reinforcing its system-based approach. The focus is on practical solutions for greater precision, safety and efficiency in day-to-day work.

Precise and safe sawing

With the AZ-KS 120 multifunctional stop, Festool is expanding its range of accessories for mitre-and-rip saws. An integrated hold-down clamp secures workpieces firmly and reduces the risk of kickback. Height-adjustable stops allow for precise positioning of profiles, whilst sliding splinter guards ensure clean cuts. The aluminium profile also serves as a length stop for repeatable cuts – with the optional MFT/3-AR stop block.

Efficient manual sanding

The new HSK sanding blocks complement the surface finishing range. The HSK-A 80x130 offers ergonomic operation with integrated dust extraction. The HSK-Duo 80x133 is suitable for both flat surfaces and curves thanks to two different foam hardnesses. Mesh abrasives reduce dust and increase service life.

First aid within the system

With the SYS3 M 112-FA, Festool is integrating a DIN 13157-compliant first-aid solution into the Systainer system for the first time. The first-aid kit can be transported and connected seamlessly and is suitable for craft businesses with up to ten employees.

Back in spring 2026, Festool expanded its range of accessories to include new system solutions for sawing, extraction and sanding, such as a plunge-cut positioner, diamond circular saw blades, a guide rail holder, an extraction arm, as well as 'Granat' sanding discs and complementary SYS-AIR and CT accessories. These were complemented by, amongst other things, lighting modules, a Bluetooth® module, a reducer sleeve, a seat cushion and the Systainer³ PowerHub.
