Festool expands its range of clever accessories and consumables

New system solutions for sawing, extraction and sanding – available from April 2026

Festool is strengthening its range of system solutions with a series of specially developed new accessories. They optimise precision, ergonomics and efficiency in the workshop and on the construction site – and expand the Festool system for sawing, extraction and sanding.

The new products include high-quality sawing accessories such as the FS-EP plunge position indicator, the DIA LAMINATE/HPL diamond circular saw blade and the FS-HALTERUNG HA-FS/2 holder. In addition, the extraction range includes the flexible CT ASA FLX extraction arms for mobile and stationary use, as well as supplementary accessories for CT extraction units, the SYS-AIR air cleaner and garnet sanding discs in new pack sizes.

Precise sawing: new accessories for plunge saws and guide rails

The new FS-EP immersion position indicator makes it even easier and more precise to make cut-outs. It shows the exact entry and exit points of the saw blade for the desired cutting depth. Further advantages include working close to walls thanks to its symmetrical design and quick orientation thanks to the cutting width indicator. The FS-EP is also available as a set with one-handed clamps in the SYS3 Systainer.

Festool is also introducing its new DIA LAMINATE/HPL diamond circular saw blade, which has been specially developed for abrasive materials. It offers up to 15 times longer service life compared to conventional carbide blades and is ideal for laminate, HPL, CPL, fibre cement, cement- and gypsum-bonded panels and mineral materials.

With the new FS HA-FS/2 holder, Festool is now launching its particularly popular 3D printing accessory as a series product. The robust wall mount keeps the workshop tidy and provides a firm, secure place for all FS guide rails from 800 mm to 5,000 mm. This keeps work surfaces and floors clear, while the rails are protected and stored within easy reach. Simple wall mounting saves space and ensures a tidy, efficient work area.

Clever system solution for dust extraction

With the new CT ASA FLX extraction arm, Festool enhances the possibilities of a flexible, ergonomic hose management solution – both on-site and in the workshop. The overhead-guided extraction arm ensures comfortable operation without the risk of tripping or snagging. The CT ASA FLX is available in two variants: The mobile CT ASA FLX J, ideal for on-site use, can be directly attached to a CT extractor or a multifunction table (MFT). Thanks to its telescopic tube, the height can be adjusted as required. Modular chain links allow the arm's length to be quickly altered or rolled up and stowed in the SYS-MFT for convenience. It is particularly suited for sanding, cutting, and milling tasks while on the move. For stationary workplaces in workshops, the CT ASA FLX W extraction arm has been designed, as it can be mounted on the wall. This variant is also pivotable, modular in design, and offers integrated hose and cable management. It is perfectly compatible with pre-separators and CT extractors. Both variants enhance comfort and safety by keeping hoses and cables off the ground, thereby significantly increasing freedom of movement. Additionally, Festool offers a new activated carbon filter VF-AK-SYS-AIR for the SYS-AIR air cleaner. This reliably absorbs unpleasant odours such as paint fumes, mould, or solvents, improving indoor air quality during renovation and workshop tasks.

New system solutions for sanding

Festool is also expanding its range of proven garnet abrasives with new 50-piece packs – ideal for professional users with high consumption.

The abrasives are available in two formats: Delta 100 × 150 mm for DTS 400, DTSC 400, DS 400 and 80 × 133 mm for RTS/RTSC 400, RS 400, LS 130 and other devices. Grit sizes from P100 to P400 cover a wide range of applications – from coarse to fine sanding.

With these clever solutions, Festool is consistently pursuing its system concept: accessories, consumables and extraction solutions work together seamlessly and support professional users in working precisely, cleanly and efficiently.

The new products will be available from 7 April 2026. Further information is available at festool.co.uk

Festool expands its range of clever accessories and consumables

New system solutions for sawing, extraction and sanding – from April 2026

Festool is strengthening its system portfolio with new, practical accessories and consumables solutions. These innovations increase precision, ergonomics and efficiency – both in the workshop and on the construction site.

Precise sawing

The new FS-EP plunge position indicator makes it easier to cut precise sections by accurately displaying the entry and exit points of the saw blade. Working close to walls and quick orientation thanks to the cutting width indicator ensure additional safety. The FS-EP is also available as a set with one-handed clamps in the SYS3 Systainer. Festool also offers a new DIA LAMINATE/HPL diamond circular saw blade – with up to 15 times longer service life – ideal for laminate, HPL, CPL, fibre cement and mineral boards. With the new FS HA-FS/2 mounting bracket, Festool is now launching a particularly popular 3D printing accessory as a series product, creating a fixed, secure place for all FS guide rails from 800 mm to 5,000 mm. The robust wall mount keeps your workshop tidy, keeps work surfaces and floors clear, and provides protected storage that is always within reach.

Clever extraction solutions

The flexible CT-ASA FLX extraction arm allows convenient hose routing from above. The mobile FLX J version is attached directly to CT extractors and is height-adjustable – perfect for working on the move. The stationary FLX W version for wall mounting offers integrated hose and cable management and is ideal for workshop workstations. The new VF-AK-SYS-AIR activated carbon filter for the SYS-AIR air purifier complements the system.

Efficient grinding

The tried-and-tested garnet sanding discs are now also available in packs of 50 – in sizes 100 × 150 mm and 80 × 133 mm and in grit sizes from P100 to P400. Ideal for professional users with high consumption.

With these new products, Festool is consistently continuing its system concept and supporting users in working precisely, cleanly and efficiently.

Available from 7 April 2026. Further information at festool.co.uk

Festool expands its range of clever accessories and consumables

New solutions for sawing, extraction and sanding – from April 2026
Festool is launching new system solutions that further increase precision, ergonomics and efficiency.

The FS-EP plunge position indicator ensures precise sawing work by marking the entry and exit points exactly and making it easier to work close to walls. In addition, the DIA LAMINATE/HPL saw blade offers up to 15 times longer service life for abrasive materials. With the new FS HA-FS/2 holder, Festool is launching a particularly popular 3D printing accessory as a series product, creating a fixed, secure and space-saving storage location for all FS guide rails from 800 mm to 5,000 mm.

In the realm of dust extraction, the flexible CT ASA FLX extraction arm extends the possibilities of overhead hose management with comfort – available as the mobile FLX J for on-site use or as the stationary FLX W for workshop use. Complementing this, the activated carbon filter VF-AK-SYS-AIR is also introduced for the SYS-AIR air cleaner.

For sanding applications, the proven garnet sanding discs are now also available in packs of 50 – in two formats and grit sizes from P100 to P400.

The new products will be available from 7 April 2026. Information at festool.co.uk

Festool is expanding its range of accessories and consumables! From April 2026, new system solutions will be available for precise sawing, efficient extraction and clean sanding. These include the FS-EP plunge position indicator, the durable DIA LAMINATE/HPL saw blade and the new FS-Halterung HA-FS/2 for safe, space-saving rail storage. For extraction, there is now the flexible CT-ASA FLX extraction arm, new CT and SYS-AIR accessories and, for sanding, garnet sanding discs in packs of 50. More information at festool.co.uk
