One guide – many possibilities

The new AS-KS 120 R/L multifunctional stop from Festool

Precise cuts, secure workpiece guidance and greater flexibility for a wide range of applications: With the new multifunctional fence, Festool is expanding the range of applications for the KAPEX KS 120 and KS 88 mitre-and-rip saws. This well-designed accessory supports professionals in interior finishing, furniture making and timber construction with precise and repeatable cuts – from the smallest workpieces right through to cornice and moulding profiles.

Safe sawing – without time-consuming clamping

The hold-down function of the multifunctional fence holds the workpiece securely in position during sawing. This reduces the risk of material kickback and potential damage to the workpiece and machine. At the same time, the workpiece remains movable and can be easily shifted under the fence to align it precisely with the cutting mark. This eliminates the need for additional clamping procedures in many applications.

Clean cuts down to the last detail

The multifunctional fence really comes into its own with small workpieces and short cuts. Adjustable splinter guards support the workpiece right up to the saw blade, enabling tear-free cuts even with delicate materials. The splinter guards perform several functions simultaneously:

- secure support of the workpiece
- low-splinter cuts on the exit side of the saw blade
- practical scoring mark
- quick and easy replacement when worn

The integrated 'Zero Clearance' function ensures particularly precise material support directly at the cutting edge.

Easy positioning of cornice and moulding profiles

The height-adjustable stop enables the precise positioning and repeatable cutting of cornice and moulding profiles up to 168 millimetres directly in their original wall position. The workpieces are supported right up to the saw blade, which ensures consistently precise results. Unlike other solutions, this leaves the saw table free for standard cross-cuts and prevents it from becoming blocked.

More than just a stop

In addition to its function as a stop, the height-adjustable aluminium profile also serves as a length stop for repeat cuts. For batch cutting, the profile can be supplemented with the optional MFT/3-AR stop rider. This allows workpieces to be cut to identical lengths quickly and reproducibly. Furthermore, the aluminium profile serves as a guide for groove cuts or as a spacer for special applications.

Quick to set up

The multifunctional stop is designed to simplify everyday work.

The splinter guard and contact plate can be fitted or removed without tools. This allows the fence to be quickly adapted to different applications, such as when working in the special mitre position on the KS 120: to do this, the splinter guard and contact plate are removed, enabling even tall workpieces to be mitred.

The ideal base: the KAPEX KS 120

The multifunctional stop reveals its full potential when used in conjunction with the KAPEX KS 120 REB – a crosscut saw that has been regarded as the benchmark in its class for years. The double-column guide with dual ball bearings ensures backlash-free,

consistently precise cuts. The dual-line laser displays the exact cutting path from both sides of the kerf and enables quick, secure positioning of the workpiece – regardless of the reference edge.

Fine-adjustable mitre and bevel angles can be conveniently set from the front and, in combination with the robust mechanics, enable precise mitre and double mitre cuts. The integrated special crosscut position extends the cutting depth to up to 120 mm and is particularly suitable for tall profiles and working in the 'original wall position'. With a cutting capacity of up to 305 x 88 mm, the KAPEX KS 120 handles even large cross-sections with ease. Carpenters benefit from the high performance when cross-cutting beams – joiners from the precise repeatability during batch cutting. Despite its performance, the KAPEX KS 120 remains compact and portable: weighing around 24.3 kg, with a well-designed construction and integrated transport solutions, it is ideally suited for flexible use on site and in the workshop.

Greater efficiency for professionals

The multifunctional fence is compatible with both the KAPEX KS 120 and KS 88. With its combination of hold-down function, splinter guard, rip fence and height-adjustable aluminium profile, the multifunctional fence offers numerous ways to simplify workflows and increase precision in daily use.

The AS-KS 120 R/L multifunctional stop will be available from 7 September 2026. Further information at [festool.co.uk](https://www.festool.co.uk)

One guide – many possibilities

The AS-KS 120 R/L multifunctional fence from Festool

Precise cuts, secure workpiece guidance and greater flexibility: with the new multifunctional stop, Festool is expanding the capabilities of the KAPEX KS 120 and KS 88 mitre-and-rip saws. It supports professionals in interior finishing, furniture making and timber construction with precise, repeatable cuts – from small workpieces to complex profiles.

The hold-down function secures the workpiece reliably, reduces the risk of material kickback and eliminates the need for many clamping operations – without any time-consuming clamping. The splinter guard with 'Zero Clearance' function enables secure material support directly at the saw blade. This allows even very small sections to be cut to length safely and precisely. The support also ensures tear-free cuts.

The height-adjustable stop enables the exact positioning and repeatable cutting of cornice and stucco profiles up to 168 mm in their original wall position – precisely and without restricting the saw table. The aluminium profile can also be used as a length stop for batch cutting (optionally with MFT/3-AR), as a support or as a spacer. The splinter guard and contact plate can be fitted without tools, allowing the multifunctional stop to be flexibly adjusted – even for special mitre angles with the KAPEX KS 120. In this combination, the full potential is realised with precise guidance, a dual-line laser and high performance in a compact design. Greater efficiency, greater precision: the multifunctional stop will be available from specialist retailers from 7 September 2026. Further information at [festool.co.uk](https://www.festool.co.uk)

One stop – many possibilities

With the AS-KS 120 R/L multifunctional fence, Festool is expanding its range of accessories for the KAPEX KS 120 and KS 88 mitre-and-rip saws to include a versatile solution for precise and safe cuts. The hold-down function secures workpieces firmly, reducing the risk of kickback – without any time-consuming clamping. The splinter guard with 'Zero Clearance' function allows the material to be supported securely directly against the saw blade. This means even very small sections can be cut to length safely and precisely. The support also enables tear-free cuts. The height-adjustable stop allows for the precise cutting of cornice and moulding profiles up to 168 mm in their original wall position, without restricting the saw table. The aluminium profile serves both as a length stop for batch cutting and as a support or spacer. Components that can be fitted without tools ensure quick adjustment. Available from 7 September 2026 from specialist retailers. Further information at festool.co.uk

One guide, many possibilities: the AS-KS 120 R/L multifunctional guide makes the KAPEX KS 120 and KS 88 even more versatile. Secure hold-down function, tear-free cuts thanks to splinter protection and maximum precision with zero clearance. Even cornice and stucco profiles up to 168 mm can be machined precisely flush with the wall. Flexible, quick to set up and made for true professionals. Available from 7 September 2026 in specialist shops – details at festool.co.uk

A guide that makes all the difference: with the AS-KS 120 R/L multifunctional guide, Festool is expanding the KAPEX KS 120 and KS 88 ranges with a versatile solution for precise and safe cuts. The hold-down function ensures a secure hold without time-consuming clamping. The splinter guard with 'Zero Clearance' function allows for secure material support directly at the saw blade. This means even very small sections can be cut to length safely and precisely. The support also enables tear-free cuts. Even demanding tasks are a breeze: cornice and stucco profiles up to 168 mm can be machined precisely in their original wall position. The versatile aluminium profile also serves as a length stop for batch cutting. Quick to set up without tools, the stop supports a smooth workflow in everyday use. Available from 7 September 2026 from specialist retailers. Info at festool.co.uk

More precision in a nutshell

One stop – many possibilities

The new AS-KS 120 R/L multifunctional stop from Festool

Safe sawing: The guide profile acts as a hold-down, holds the workpiece securely in position and prevents kickback. The material can be easily aligned with the marking and sawn straight away – without the need for time-consuming clamping with a workpiece clamp.

Splinter protection with 'Zero Clearance' function
For secure support of the workpiece, tear-free cuts on the exit side of the saw blade and an additional marking line. Flexibly adjustable and quick to retrofit.

Effortless sawing of cornice and stucco profiles
Quickly and easily positioned with precision, supported right up to the saw blade – for consistently precise results.

Length stop for repeat cuts
For repeat cuts to size, the aluminium profile can be used directly as a length stop. With the additional MFT/3-AR stop (accessory), workpieces can be cut precisely to size. When not in use, it can simply be folded away.

Easy adjustment
The stop can be set up quickly and easily. The splinter guard and contact plate can be fitted in a few simple steps without tools – or removed if required removed.

For narrow workpieces

Even narrow strips can be safely and reliably positioned and cut to size.

Ideal for small sections

Material support close to the saw blade. This ensures that even the smallest sections are cut safely.

Working in a special mitre position

For maximum flexibility when cutting tall workpieces – even at a mitre. Simply remove the splinter guard and contact plate.

Splinter guard replacement plates

Safe cutting even for the smallest sections; tear-free cross-cuts; secure support of the workpiece at the rear edge

The upgrade for your KAPEX KS 120 or KS 88.

The AS-KS 120 R/L multifunctional stop will be available from 7 September 2026.

KS 120 crosscut saw available as a set with multifunctional stop: incl. WOOD UNIVERSAL HW 260x2.5x30 W60 circular saw blade, AS-KS 120-R/L multifunctional stop, angle square, workpiece clamp, Allen key SW 6
