Festool expands its sawing system

PSC-E 18 cordless pendulum jigsaw and the comprehensive sawing portfolio

With the launch of the new PSC-E 18 cordless pendulum jigsaw and several new system and accessory innovations, Festool is once again strengthening its position as a specialist in professional sawing solutions. This new addition complements a sawing system that now covers an impressive range: from various precise plunge saws and the mobile Systainer table saw CSC SYS 50 to various jigsaws, mitre saws and the corded table saw TKS 80 for woodworking and interior finishing. Together with the HK/HKC saws, the KSC 60 and SYMC 70 mitre saws, and the tried-and-tested guide rail system, this creates a diverse range of saws that appeals equally to joinery workshops, interior finishing firms and timber construction specialists.

Simple jigsaws

At the heart of the new products for April is the new PSC-E 18, a particularly lightweight, compact cordless pendulum jigsaw specifically designed for assembly and fitting work. Its development follows three clear guiding principles: it fits exceptionally well in the hand, it is particularly easy to operate, and it delivers exactly the battery power that professional users need in their day-to-day work. Weighing just 2.3 kilograms including the battery pack and featuring an ergonomically slim design, it enables precise, balanced and fatigue-free working, even over extended periods. The non-slip soft-grip surface ensures a secure hold, whilst the triple blade guide guarantees particularly stable blade guidance and angle-accurate cuts in materials up to 40 millimetres thick. The fixed 90-degree table allows for immediate, precise sawing without the need for adjustment – a significant advantage on the construction site and during assembly work. The 23-millimetre stroke, multi-stage pendulum stroke adjustment and smooth automatic start-up control ensure fast, material-appropriate working. The tool-free, one-handed saw blade change significantly increases flexibility in varying application scenarios. At the same time, the blow function keeps the kerf clear. A mobile dust extraction unit can also be connected for low-dust working. A plastic base plate protects sensitive surfaces, whilst the clip-on splinter guard ensures tear-free cuts and reduces the need for reworking. Complemented by the new TBX 4 battery pack with innovative tabless cell technology, the PSC-E 18 combines high performance with low weight and a highly efficient power supply.

Unique range of saws

With the launch of the PSC-E 18, Festool's sawing system is expanding: The tried-and-tested plunge saws TS 55 F, TSC 55 K, TSC 55 KS and TS 60 K, as well as the scoring plunge saw TSV 60 K, continue to form the core of the range for precise, low-splinter cuts in interior finishing and assembly. The HK/HKC 55 and 60 are available for high-performance rip and cross-cutting, whilst the KSC 60 and SYMC 70 mitre saws enable millimetre-precise cutting to length and trimming, even of large cross-sections. In the field of table saws, Festool covers both mobile and stationary applications: The CSC SYS 50 offers maximum precision in a compact Systainer format for assembly and mobile interior finishing, whilst the TKS 80 is a powerful corded table saw designed for safe, precise and high-performance workshop tasks – particularly for joiners, timber construction and finishing trades requiring a reliable stationary solution.

The right blade for every task

An essential component of the Festool sawing system is the diverse range of saw blades, which Festool has developed from the ground up to meet professional requirements. The selection ranges from universal standard blades to special blades for solid wood, coated

materials or non-ferrous metals, right through to particularly durable diamond blades such as the new DIA LAMINATE/HPL, which impresses with a service life up to 15 times longer and was developed specifically for abrasive materials such as laminate, HPL, CPL, fibre cement and mineral boards. To ensure quick identification, Festool uses a clear colour-coding system that allows users to see at a glance which saw blade is suitable for which material. This enables tools to be configured more quickly and ensures incorrect use is reliably avoided – a decisive advantage for efficiency and quality in everyday work.

Smart additions for even more precise cuts

At the same time, Festool is expanding its range of accessories with solutions designed to enhance precision. The new FS-EP plunge position indicator precisely displays the entry and exit points of the saw blade, thereby facilitating precise cut-outs without time-consuming alignment. Thanks to its symmetrical design, it can be positioned on either the right or left side of the guide rail, which is particularly advantageous for applications close to walls. The integrated cut width indicator also aids in the clean marking of narrow strips. The expansion of the system is rounded off by the new FS holder HA-FS/2. It provides a secure, protected place on the wall for all guide rails between 800 and 5000 millimetres, keeps the workshop tidy and ensures that rails are always quickly accessible and stored optimally.

With these new products, Festool is consistently pursuing its system philosophy: the interplay of powerful machines, precisely matched accessories, well-thought-out organisation and a robust 18-volt power system creates a harmonious overall ecosystem for precise, efficient and reliable sawing. All new products will be available from specialist retailers from **7 April 2026**. Further information at festool.co.uk

Festool expands its sawing system

PSC-E 18 cordless pendulum jigsaw and a comprehensive sawing portfolio

With the new PSC-E 18 cordless pendulum jigsaw and expanded range of accessories, Festool is strengthening its position in the field of professional sawing solutions. This new addition complements a sawing system that ranges from various precision plunge saws and the CSC SYS 50 mobile table saw to jigsaws, mitre saws and the TKS 80 stationary table saw. Together with the HK/HKC saws, the KSC 60 and SYMC 70, and the guide rail system, this creates a versatile solution for joiners, interior fitters and timber construction.

The highlight of the new products for April is the exceptionally lightweight PSC-E 18, which Festool has developed as the ideal entry-level model and for quick assembly and adjustment tasks. It fits ergonomically in the hand, is easy to use and delivers the necessary battery power. Weighing just 2.3 kg including the battery, with a triple blade guide and a fixed 90° table, it enables precise, square cuts up to 40 mm. Pendulum action, soft start, tool-free blade change and a blow function ensure efficient working. A plastic base plate and attachable splinter guard help ensure clean cut edges. Combined with the new TBX 4 battery pack, this creates a particularly lightweight and long-lasting 18-volt setup. The Festool sawing system also comprises a wide range of machines: the plunge saws remain the centrepiece for demanding precision cuts, the jigsaw range is usefully complemented by the PSC-E 18, and mitre and HK/HKC saws enable powerful rip and cross-cutting. The CSC SYS 50 and TKS 80 cover mobile and stationary table saw applications. Another key component of the system is the extensive range of saw blades for a wide variety of materials – from standard and special blades to diamond blades

such as the new DIA LAMINATE/HPL. Clear colour coding simplifies selection and ensures efficient, safe configuration. Festool is expanding its range of accessories for even more precise cuts: the new FS-EP plunge position indicator marks entry and exit points precisely and makes it easier to cut close to walls; the FS-HA-FS/2 holder keeps everything tidy and allows quick access to all guide rails. All new products will be available from specialist retailers from 7 April 2026. Further information at festool.co.uk

New to the Festool sawing system: the PSC-E 18 cordless pendulum jigsaw is here! 💧

Lightweight and easy to handle, it is considered the ideal entry-level jigsaw and is designed for precise assembly work up to 40 mm: the PSC-E 18 will be joining the Festool sawing system from 7 April 2026.

✦ Highlights at a glance:

- Weighs just 2.3 kg including battery pack
- Triple blade guide for clean, precise cuts
- Sturdy 90° table
- Tool-free blade change
- Cutting depth up to 40 mm
- Longer runtime thanks to the new TBX 4 battery pack

✂ The Festool sawing system also includes: plunge saws, HK/HKC models, mitre-and-sliding saws, the portable CSC SYS 50, the stationary TKS 80, and a wide range of saw blades with practical colour coding. Plus matching accessories such as the FS EP and the FS/2 holder.

New to the Festool sawing system: the PSC-E 18 cordless pendulum jigsaw

Festool is expanding its sawing system with the new PSC-E 18 – lightweight, handy and perfect for precise assembly work. The ideal entry-level model among cordless jigsaws. Weighing just 2.3 kg (including battery), with triple blade guidance, a fixed 90° table and tool-free blade change, it ensures clean and efficient cuts up to 40 mm. The new TBX 4 battery pack delivers extra runtime with low weight.

The comprehensive saw range also includes plunge saws, HK/HKC models, mitre saws, the portable CSC SYS 50 and the stationary TKS 80. In addition, Festool offers a wide range of saw blades with practical colour coding, as well as accessories such as the FS-EP plunge depth indicator and the FS-HA-FS/2 mounting bracket.

Available from 7 April 2026. More information at [festool.co.uk](https://www.festool.co.uk)

IMAGE PREVIEW @Image rights Festool GmbH **The new PSC-E 18 cordless pendulum jigsaw**

Easy jigsawing with the new PSC-E 18 cordless pendulum jigsaw

Lightweight and easy to handle: low weight, slim design and non-slip soft-grip coating for optimal handling.

Stable blade guidance: The triple blade guide ensures for precise, angle-accurate cuts in materials up to 40 mm thick.

Working within the Festool system: The 18V power in the Festool system allows you to switch seamlessly between batteries and tools.

Clear view of the marking line: The light, dust extraction and blow function keep the marking line marking line.

Quick saw blade change: Tool-free, one-handed blade change for fast workflows and material-appropriate

Easy right-angle cuts: The fixed 90° table ensures right-angled cuts – easily and without adjustment.

Cuts with minimal tear-out for less reworking: The clip-on tear-out guard ensures cuts with minimal tear-out and saves time-consuming reworking.

Low-dust operation: For low-dust operation, a mobile dust extraction unit can be connected via the dust extraction port.
